

Installation guide for magnetic bracket

When Bica indoor waste bins are delivered with a magnetic wall bracket, the waste bin must be secured to the wall bracket when implemented/installed. Below is a description of how the wall bracket should be mounted. The set consists of a wall bracket with magnets and 2 cover caps; screws are not included

1. The wall bracket is screwed into the wall or surface where the bins are to be placed. For this purpose, there are two pre-drilled holes at each end of the bracket.

The magnetic wall bracket should be mounted so that it aligns with the top frame of the waste bin. The included cover caps are inserted after the bracket is mounted on the wall or surface.

2. It is the installer's responsibility to use screws that are suitable for the surface on which the wall bracket is to be mounted. The installer is also responsible for ensuring that all magnets are fixated to the waste bin when it is attached to the magnets.
